Allowable Subject Matter

1. Claims 3-9, 13-19, 23 and 24 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

2. The following is a statement of reasons for the indication of allowable subject matter: Prior art failed to establish the required measuring of physical characteristics rather than electrical characteristics of a carbon nanotube based device.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2, 10-12, 20-22 and 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Wei et al. (6,852,582) in view of Unger (6,777,960).

Regarding Claims 1,2,10-12, 20-22 and 25, Wei et al. disclose carbon nanotube gate field effect transistor where in Fig. 4, two carbon nanotube field effect transistors with gates 41 and 42 and shared source/drain regions 43 and 44 are disposed proximate to each other. Wei et al. Fail to disclose the required monitoring device. However, Unger discloses method of interrining existence of light by means of a measurement of the electrical characteristics of a nanotube bound with a dye and detection arrangement

where in Figs. 2A-2D, and claims 1, 4 and 4, the required monitoring of the electrical characteristics of device 200 with monitoring device 202 is discloses.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required monitoring of electrical characteristics in Wei et al. as taught by Unger in order to gain better understanding of the carbon nanotube base electrical devices.
